

swabsafe™

Safe and hygienic swab management

Designed to eliminate risk

Eliminate the unnecessary handling of contaminated swabs with this unique and modernised swab management system. SwabSafe™ allows clinicians to visually keep track of all used consumables during operating times, whilst minimising the re-handling of healthcare waste.

Swab counting is made easy with simply divided container sections and a fully fitted Swabsafe™ lid - which can be secured post-surgery.

**CENTRAL
MEDICAL
SUPPLIES**

Swabsafe™ containers are produced entirely from recycled post-consumer plastic (rPET)

Recommended Practice for Management of Surgical Swabs (AfPP 2022)

"As part of an effective risk management strategy, it is recommended that a suitable contained disposal system is in place. If appropriate, the system used should be sealed and the number of contents recorded on the outside of the disposal system."

"At all times during a surgical procedure the perioperative practitioner must be aware of the location of all swabs."

"Used swabs should be accessible to view by the operating surgeon, anaesthetist, and perioperative practitioner where applicable throughout a clinically invasive procedure."

Accountable Items, Swab, Instrument and Needle Count, Standards & Recommendations for Safe Perioperative Practice – Fifth Edition (AfPP 2022)
